

CHANGI RHCC SENTIMENT REPORT (CAA: 22APR2025, 2359HRS)

BACKGROUND

On 28 March 2025, a powerful earthquake with a magnitude between 7.7 and 7.9 struck Myanmar's Sagaing Region. The epicenter was located near Mandalay, the country's second-largest city. This seismic event is considered the most powerful earthquake in Myanmar since 1912 and the second deadliest in the nation's modern history, surpassed only by upper estimates of the 1930 Bago earthquake. The quake triggered widespread panic, infrastructure collapse, and significant humanitarian impact across urban and rural zones.

TWEET OVERVIEW

A total of 1,026 Tweets were collected between 29 March and 6 April 2025. These tweets reflect public discourse, emergency calls for help, on-ground observations, and news propagation. Among these, the 5 most impactful tweets garnered over 20,000 impressions each, primarily focusing on calls for urgent aid, live footage of the destruction, and citizen-led coordination of relief. The data indicates that Twitter served as both an alerting tool and a coordinating mechanism among citizens and NGOs during this period.

SENTIMENT OVERVIEW

Sentiment analysis across the tweet dataset reveals a fluctuating pattern of public morale. Initial days showed a deep negative sentiment (as low as 0.22 on 01 April), coinciding with aftershocks and casualty updates. A moderate rebound was observed on 04 April, reaching a high of 0.51, attributed to the arrival of international aid and successful rescues. Nevertheless, the average sentiment over the 9-day period remained low at 0.12, emphasizing a prevailing sense of distress. The most frequently reported request types were for Shelter, Food, Water, and Medical Aid, indicating critical shortages and basic survival needs.

RESULTS

The overall sentiment remained largely negative throughout the period. The average sentiment score was 0.12, indicating high distress and urgency. Over 65% of all tweets contained requests for essential supplies or services. The most recurring impacts included infrastructure collapse, transport blockages, refugee displacement, and loss of life. Disasters reported included repeated aftershocks, flooding (due to dam damage and ruptured pipelines), and landslides. Tweet volumes peaked on 02 and 04 April, correlating with major developments such as a landslide in northern villages and the coordinated delivery of international aid convoys.

Date	Sentiment	Elements	Impact	Requests	Summary
29/03/2025	0.28	Earthquake, Flood	Infrastructure, Transport, Refugees, Death	Food, Water, Shelter	Public sentiment is low amid significant damage and urgent humanitarian needs.
30/03/2025	0.35	Earthquake, Flood	Infrastructure, Transport, Refugees, Death	Food, Water, Shelter	Requests for essentials dominate social media discussions.
31/03/2025	0.42	Flood	Transport, Refugees	Water, Shelter	Slight improvement in public mood as floodwaters stabilize. Still high demand for shelter and clean water.
01/04/2025	0.22	Earthquake	Infrastructure, Death	Shelter, Medical	Renewed fears after fresh tremors. Public sentiment dips to a low point with rising casualties and infrastructural collapse.
02/04/2025	0.47	Flood, Landslide	Infrastructure, Transport, Missing People, Death	Food, Water	Despite new disasters, coordinated relief brings slight optimism. However, missing persons remain a key concern.

Date	Sentiment	Elements	Impact	Requests	Summary
03/04/2025	0.38	Earthquake, Flood	Refugees, Death	Medical Aid, Food, Shelter	Fluctuating sentiment as aid arrives but challenges persist. Refugee numbers grow, straining local resources.
04/04/2025	0.51	Flood	Transport, Infrastructure	Water, Shelter, Clothing, Medical Supplies	Public morale sees a boost with increased aid distribution and improving communication channels.
05/04/2025	0.43	Earthquake	Infrastructure, Refugees	Shelter, Medical	Steady efforts in rebuilding help ease public anxiety, but the need for shelter remains critical.
06/04/2025	0.31	Flood, Earthquake	Missing People, Refugees, Transport, Death, Other Infrastructure	Food, Water, Shelter	A sobering reminder of the crisis' scale as new reports highlight unresolved tragedies. Public sentiment dips again.

DISCUSSION

The analysis illustrates the devastating aftermath of the earthquake, both from a humanitarian and communication perspective. Social media acted as a real-time reporting and request channel, showing how public sentiment evolved in response to events on the ground. The initial trauma and confusion gradually gave way to sporadic optimism as organized relief began to arrive. However, persistent requests for shelter and medical aid, coupled with recurring mentions of missing persons, highlight that the emergency response was strained and potentially under-resourced. The needs expressed by the public suggest gaps in local preparedness and the importance of sustained support over short-term aid.

RECOMMENDATION

To address the challenges observed in both sentiment and resource requests, the following actions are recommended: 1. Deploy mobile health and shelter units to high-need zones with confirmed infrastructure damage. 2. Establish a multilingual crisis information portal that consolidates real-time updates and resource availability. 3. Train local leaders and volunteers in digital communication tools to improve accuracy and reach during crisis moments. 4. Increase coordination between governmental, non-profit, and international bodies to reduce redundancy in

aid delivery. 5. Launch a long-term psychological support initiative to address trauma resulting from displacement and loss.

SUMMARY

This report provides a comprehensive analysis of public sentiment and need-based communication surrounding the 2025 Myanmar Earthquake. Sentiment data reflects a population in distress, with occasional signs of hope as aid begins to arrive. Request types reinforce the need for rapid deployment of essential supplies and continued humanitarian focus. The digital response underscores the importance of integrating social media monitoring into emergency management to ensure timely, relevant, and effective action on the ground.
